

TOO GETHR

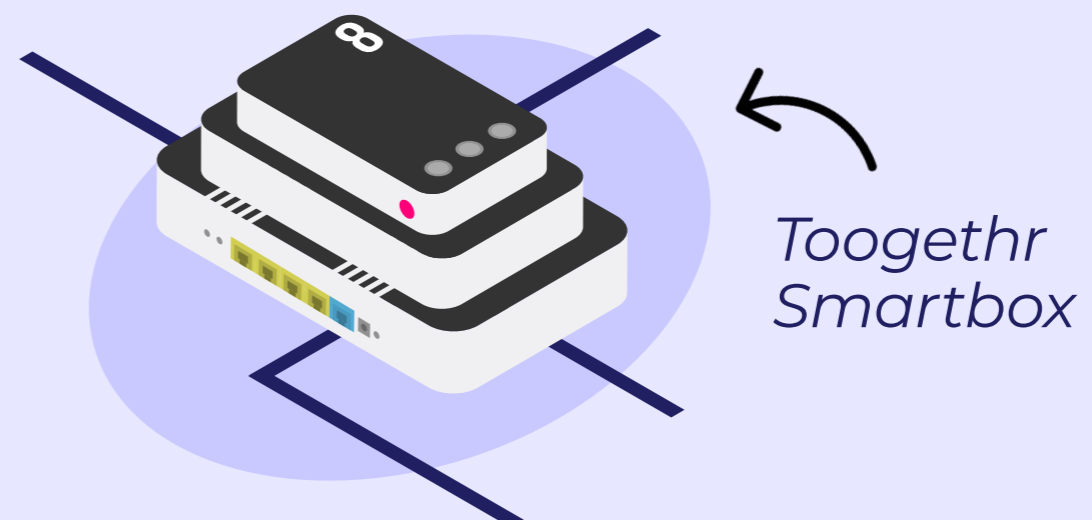

BROCHURE **SMART PARKING**

The all-in-one parking solution for access control, parking data insights, and monetising your empty parking spaces.

MAKE YOUR PARKING BARRIER SMART WITH ACCESS CONTROL

With **Toogethr Smart Parking**, you can automate the access control of your barrier. We install a **licence plate camera, QR scanner** or **card reader** in combination with our smartbox.

Your parkers can easily book a parking spot through the personalised reservation system. If the parker is recognised in our system, the barrier opens automatically.

Reserve a Charging Station

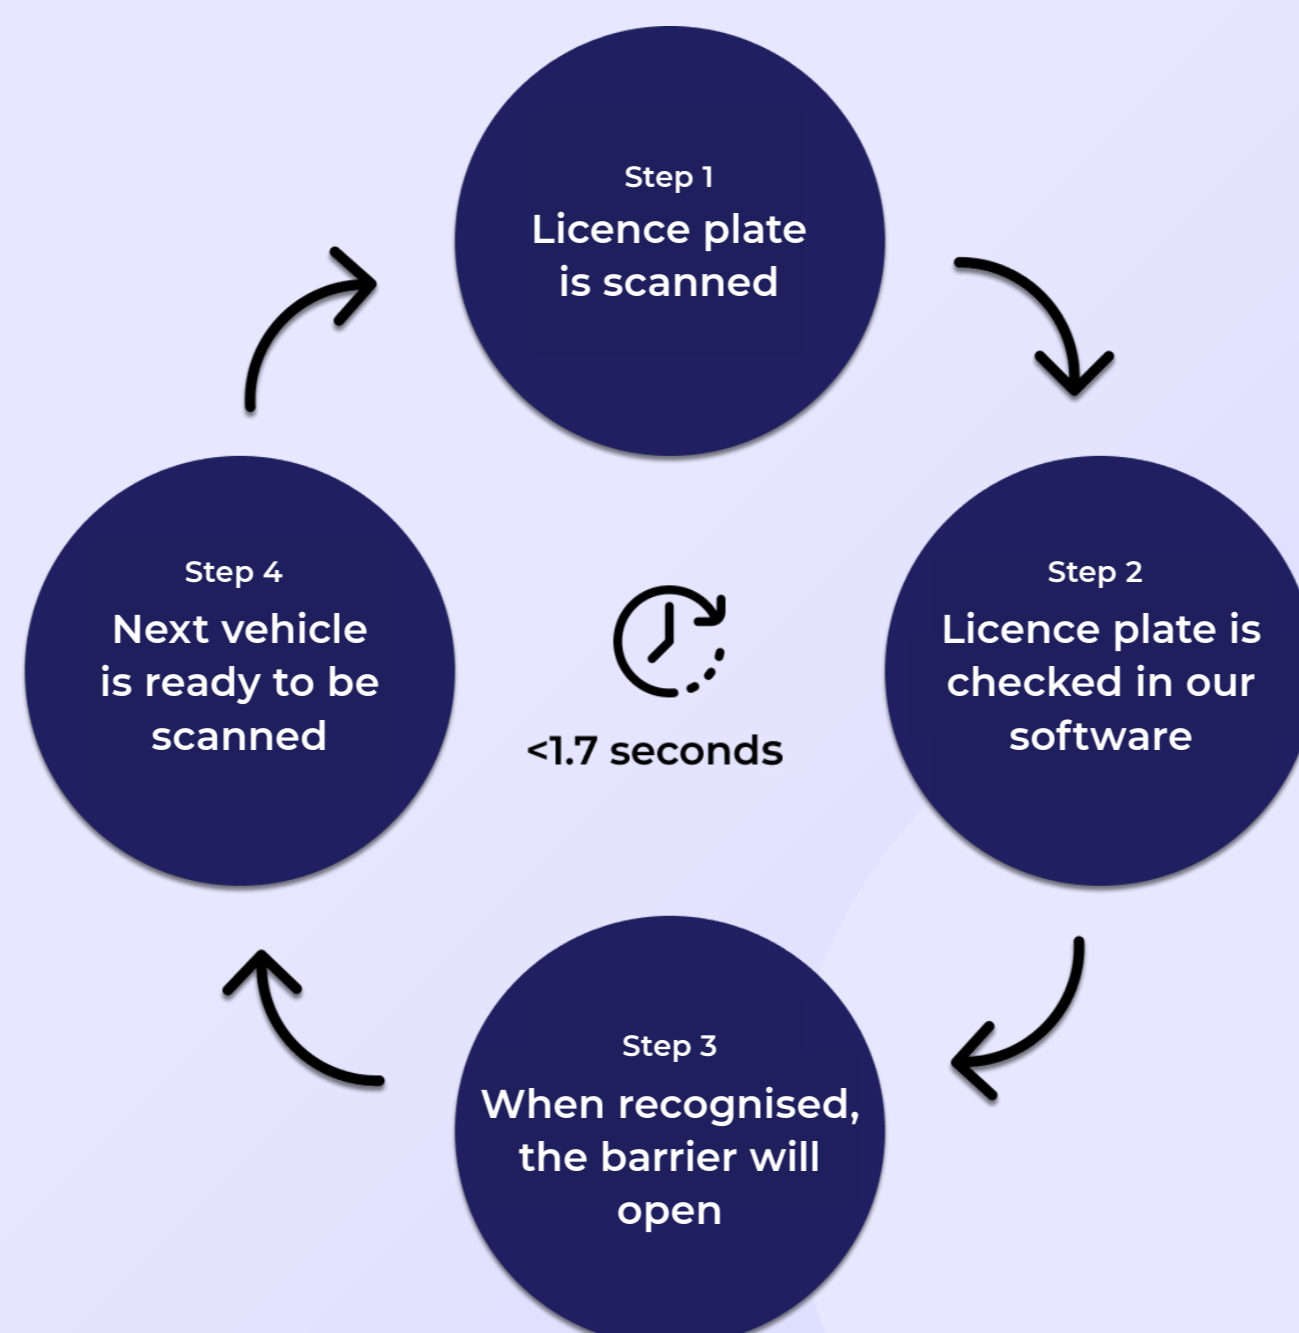

We also offer EV drivers the option to reserve a parking spot with a charging station.

No barrier? No problem. Together with our partners, we install the necessary hardware and software to provide you with a fully automatic parking management system.

What do you need?

To start with Toogethr Smart Parking, you only need power outlets and an internet connection* at the entrance of your parking location.

How does it work?

* No internet connection available? We'll install a 4G router.

INTEGRATIONS AND PARTNERS

Toogether provides the hardware and software you need to make your car park smart. Do you already have an existing parking system? No problem! We integrate with the most well-known hardware and software, such as **SKIDATA**, **Brivo**, and **Nedap**. You can find the complete list below. Is your hardware or software not listed? Don't worry. Toogether also allows you to integrate via an open API.

DATA INSIGHTS TO CREATE THE IDEAL PARKING POLICY

With the help of our smartbox, you not only add automatic access control to your barrier, but you also gain complete insight into your parking data. When do people park and what are the trends? With our extensive dashboards, you gain insights into **peak and off-peak moments**, as well as **no-shows**. Using this data, you can then develop, implement, and optimise your ideal parking policy.

Examples of parking policies:

- *Employees who live 25 kilometers or more from the office can reserve a parking spot 3 weeks in advance.*
- *Employees who live less than 10 kilometers from the office can book a parking spot 2 days in advance.*

Roles and Rights

Our platform offers 2 different user roles: operator and basic user. Additionally, you can assign extra rights to both roles, such as:

Transactions

View all parking transactions.

Gate manager

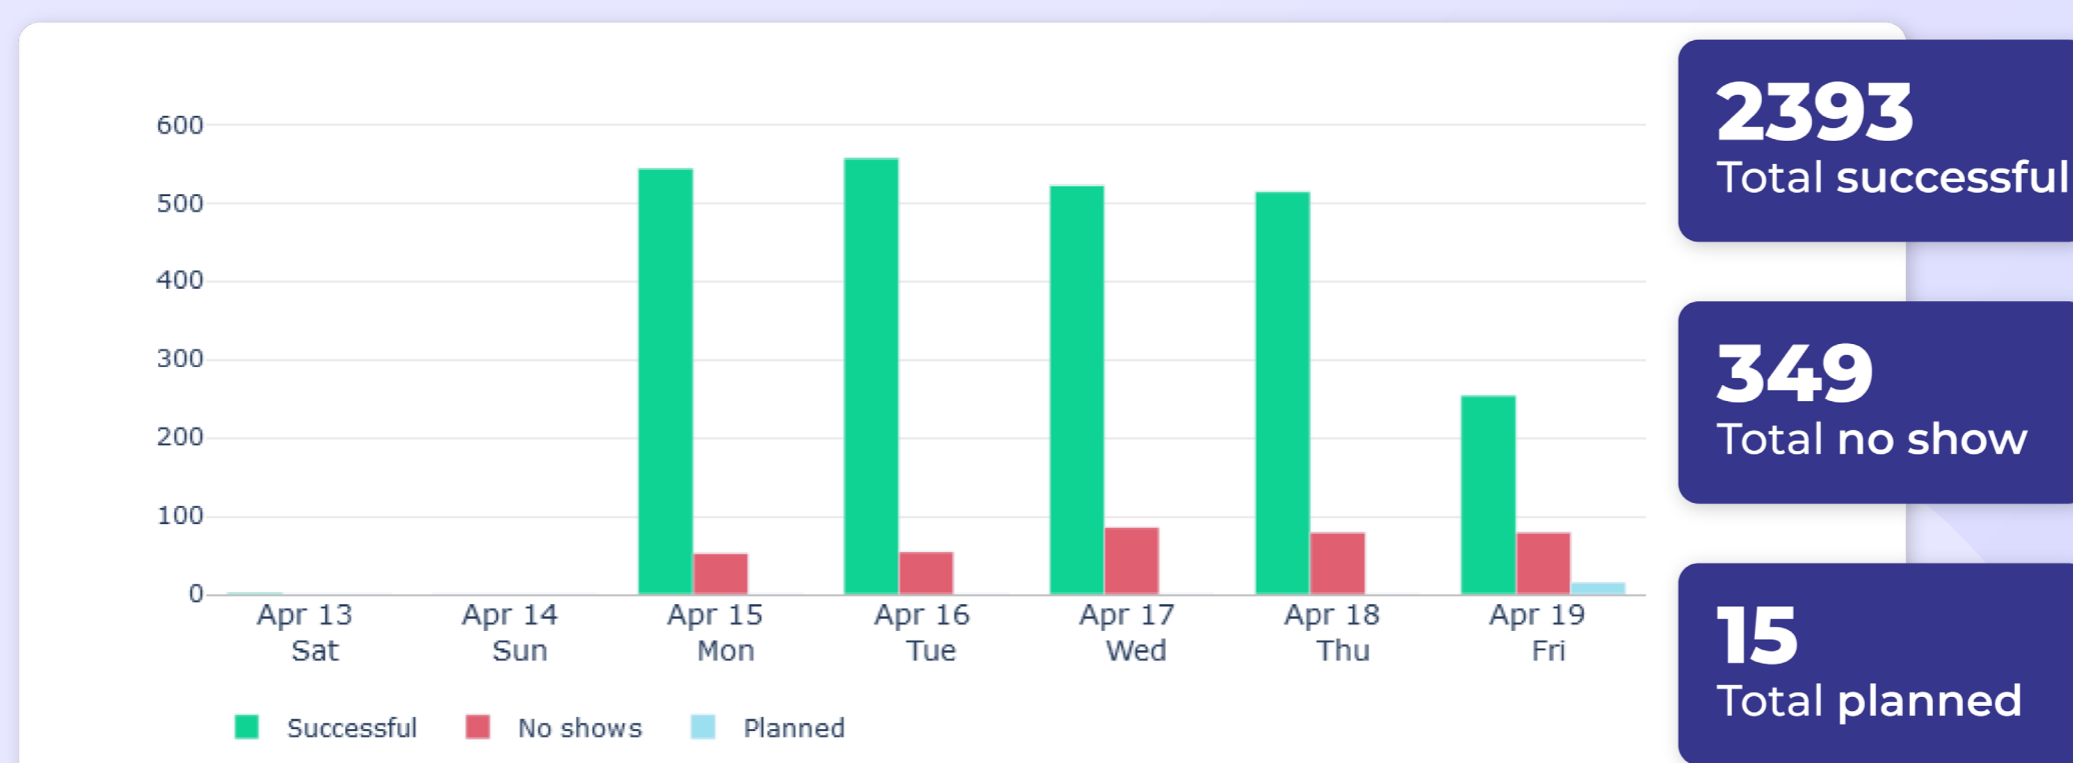

Manually open the barrier.

Booking

View the booking overview and create new bookings.

Reporting

View and export all reports.

EARN MONEY WITH EMPTY PARKING SPOTS

With smart parking software, you gain access to a vast amount of data, including the previously mentioned peak and off-peak moments. Based on this data, you also see how many parking spots are empty at any given time.

With this data, you can utilise your empty parking spots to generate revenue. Thanks to our EasyPark module, you can easily make your unoccupied parking spots available to people who want to park.

Our data shows that a parking spot is empty for an average of 18 hours per day and with 10% occupancy via EasyPark, you can earn an average of €800 per month.

The EasyPark module works as follows:

1. Choose when you want your car park to be available and confirm the parking rate
2. Open up your car park via the Togethr platform
3. The registered user accesses your car park via licence plate recognition
4. When the parker leaves, the transaction is automatically stopped
5. The parking fees are transferred to you via EasyPark

WHY TOOGETHR SMART PARKING

Become more appealing as an employer

Offer employees the option to reserve a parking spot and a charging station, making you more appealing as an employer.

Increase your hospitality

Offer guests and visitors the option to reserve a parking spot.

Reduce parking pressure and increase your revenue

Reduce over-occupancy or generate extra revenue from empty parking spots.

Carefree management

Manage your entire car park management from one clear platform and save valuable time.

Real-time data and insights

With our real-time dashboards, you are always up to date and you can optimise your parking policy accordingly.

We scale with you

Looking to adjust your parking policy in the future? Our software grows with you and is always up-to-date.

Hardware and software independent

Toogethr's software easily connects with the most well-known hardware and software.

Safety and security first

We work with a secure internet connection and are ISO27001-certified and GDPR-compliant.

ABOUT TOOGETHR

Since 2016, Toogethr has been helping companies like Heineken, ASML, and Red Bull optimise their car parks and make their commuting more sustainable. With Toogethr Parking smart parking software, we help companies gain insights, reduce parking pressure, and increase revenue.

With Toogethr Cycles, we offer a total solution to promote cycling. Through our products, organisations reduce their CO2-footprint, improve office accessibility, and become more attractive as employers.

Toogethr is part of the AutoBinck Group.
